VAFAMEDICAL Trading Company

VAFAMEDICAL Trading Company is honored for enhancing its place among medical and health consumable producers more than before, benefiting from the valuable experience of valid producers around the country, hiring expert staff, and observing quality standards. In this regard, the company has introduced high-quality products and provided after-sale services. Also, since quality is its primary principle, the company has established an advanced laboratory in the factory to test the products and ensure their quality.

Products of VAFAMEDICAL Trading Company

• Disposable bed sheets

The disposable bed sheet is one of the products provided to markets by fabric and textile producers at a reasonable price. The product, as its name says, is designed in a way that it can be used only once; therefore, it is of the best options for hospitals, clinics, health centers, trains, planes, etc. It can offer you a healthy and hygienic environment to prevent spreading contamination and disease. Types of disposable sheets are:

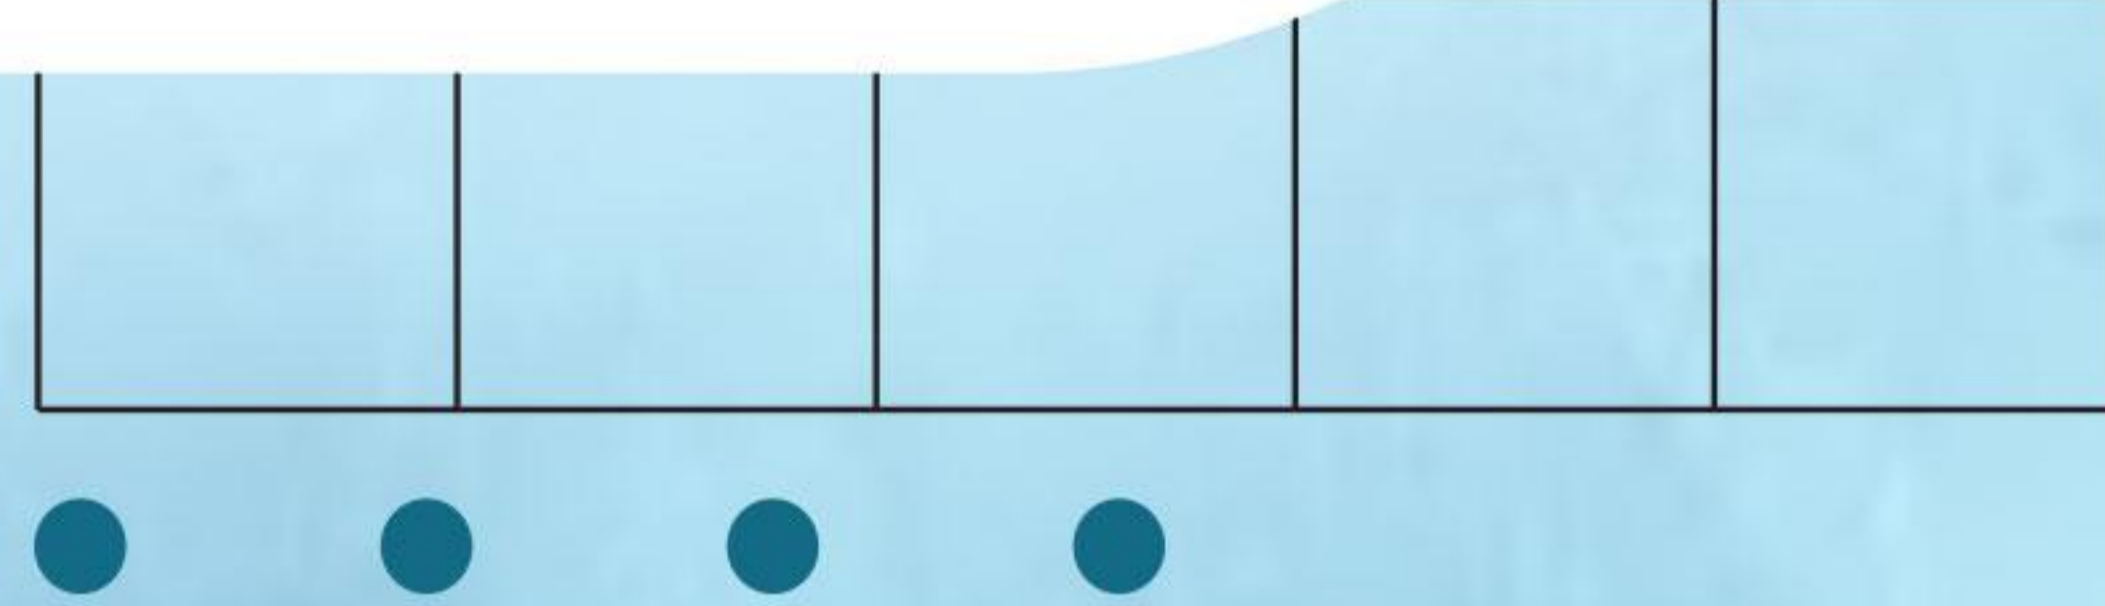

- * Roll disposable sheets in various colors, widths, and grammage
- * Sheets with elastic fitted corners in various colors, widths, and grammage
- * Simple sheets without elastic straps in various colors, widths, and grammage

• Gown and clothes

Using disposable gowns and clothes is the first step to preventing disease and infection in hospitals and health centers. They are made of spun bond fabric which is very light and low-dense to make surgeons, patients, and consumers feel comfortable. These products are generally unstitched and pressed and, in some cases, may have stitched patterns. But the smaller their seam, the safer and more secure they are against virus penetration. They are primarily blue and green and may be in happy colors to prevent eyes fatigue and give the person mental peace. Due to their fibers, they do not cause any allergies to the skin. Gowns' length and width vary depending on their application or the customer's needs. Types of hospital gowns are as follows:

- * Surgery gown with wrist
- * Patient gown
- * Cosmetic gown
- * MRI gown set

• Disposable hat

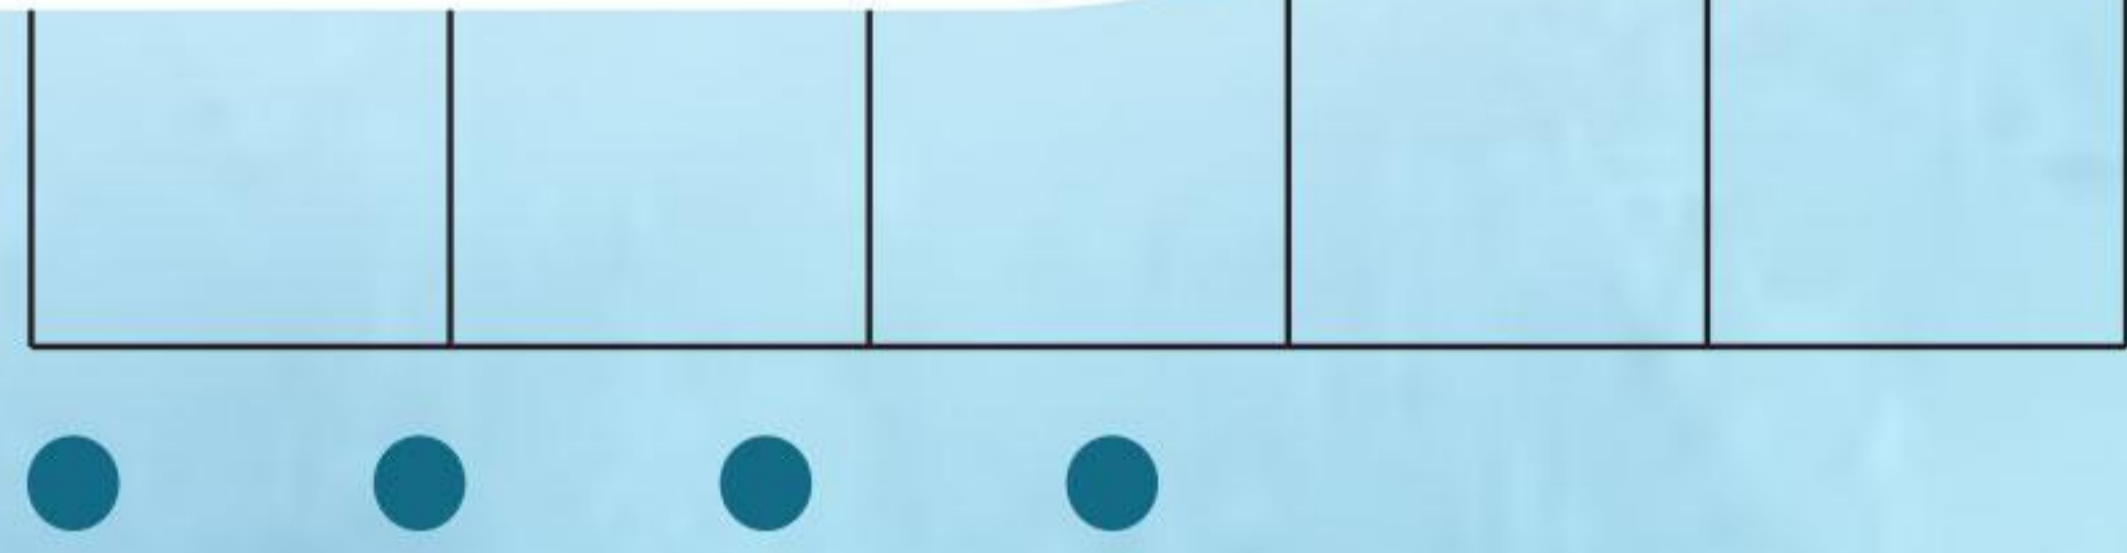

The disposable hat is another hospital item with many applications in health centers, hospitals, surgery rooms, and cosmetic and beauty salons. Since it is made from fabrics, it is anti-allergy and light, preventing the head from sweating for a long time and hair loss or dandruff. This product is a good shield from spreading infectious and virus diseases in health and cosmetic centers. VAFAMEDICAL Trading Company produces various models of medical hats, including:

- * Surgery hat with straps
- * Patient hat with a rubber band
- * Fabric and nylon accordion hat

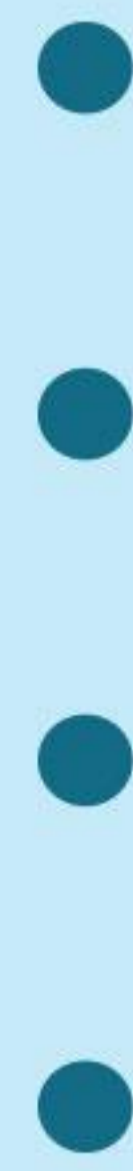

- **Disposable sleeves cover**

Disposable sleeves cover is used in hospital, kitchen, bakery, laboratory, slaughterhouse, etc. This product is made of spun band fabric, which has mesh fibers and is very light and prevents wrist and elbow sweating. Also, it does not limit the range of motion of the arm and forearm. This fabric is waterproof and prevents contamination from entering the hands and sleeves of clothes. Also, these products have strong stitching and are solid and durable, fixed on the hand with an elastic band.

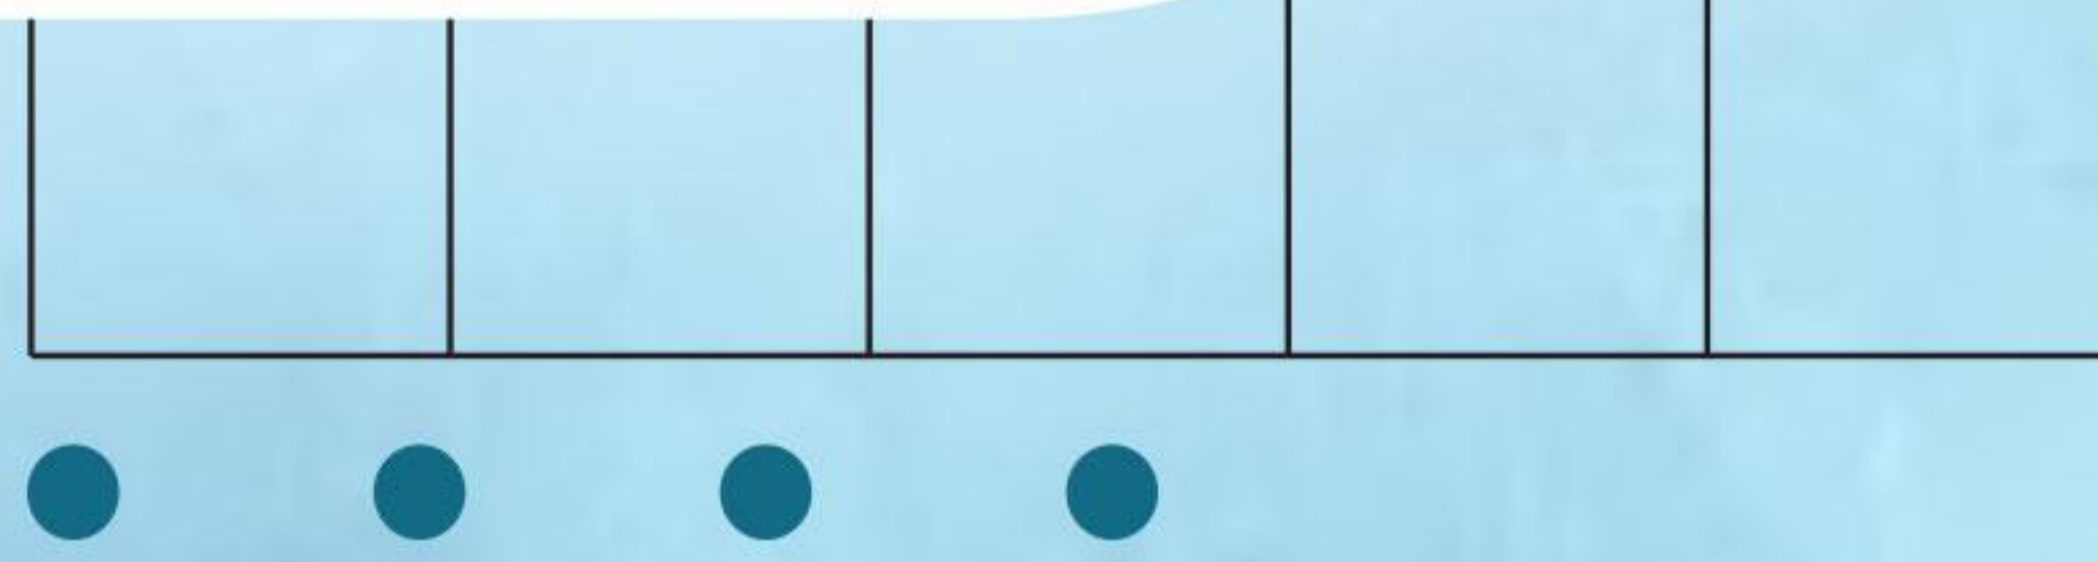

- **Disposable shoe cover**

The disposable shoe cover or hospital shoe cover is produced and provided to prevent infection spread. Nylon shoe covers are made of plastic PE, mostly 4-6 microns. They are in a single size, proper for all shoe models. The rubber band is stitched around the cover and is usually in blue.

• **Disposable towel**

Disposable towels are used in spa and massage centers to preserve hair and skin health. Due to their materials and water absorption capability, they are good choices for beauty salons. Hotels and guest houses are also customers of these products. Their healthy packaging and disposable feature help reduce using washing liquids, making them cost-effective products.

Packaging

VAFAMEDICAL Trading Company delivers all its products in attractive and sturdy packages worldwide. Our professional experts monitor the whole packaging to the delivery procedure to ensure the quality and safety of the products.
